## Oikos philosophy

### CULTURE

A resource of which our territory is rich, a source from which to draw fully to convey exclusivity to our products.

### ARSENALITÀ

As the extraordinary model of the ancient Arsenal of Venice teaches us, a work of art is the result of a perfect industrial organization combined with quality craftsmanship work.

### INNOVATION

It's the continuous improvement that allows us to guarantee the highest performance and the use of cutting-edge technology. In the processes and in the products.

### DESIGN

When the design meets the Italian creative genius and passionate craftsmanship, each product becomes unique.

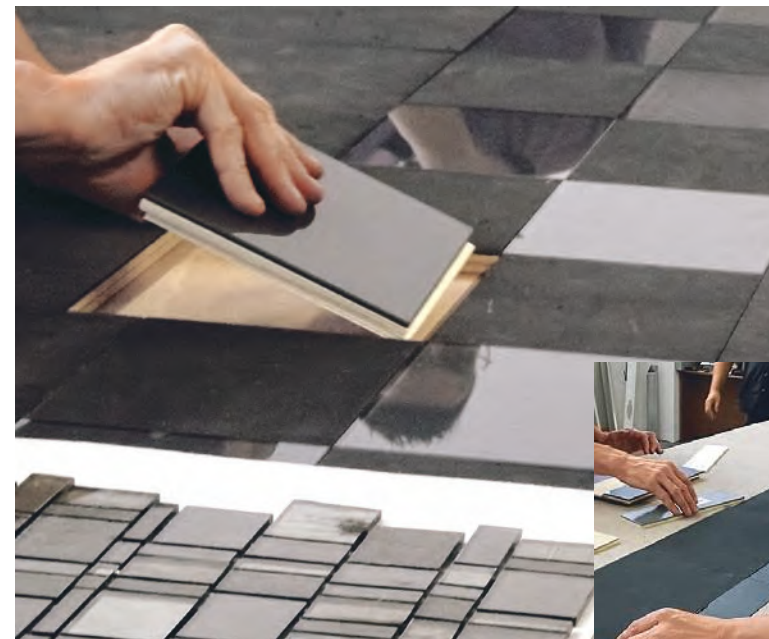

### PASSION

This is the "secret ingredient" that we use every day in everything we do. It's our way of working. The only one we know.

### CREATIVITY

Our art, a Made in Italy distinctive sign. Creative turmoil and freedom of expression as origin of any creativeness.

# NOVA

There, where there is still much to explore, much to know, much to build and invent. Here is where Nova was created. An infinite space where the Italian culture of beauty, the unlimited creativity, the passion for research and the art of design gravitate.

An underwater photograph showing sunlight rays filtering through the water, creating a serene blue environment. The word NOVA is centered in the image.

NOVA

# Entrance architectural solutions that look beyond

Innovative shapes, colors, materials and solutions always in line with the latest trends of interior design.

The perfect integration of the door with the living environment as cornerstone of our philosophy.

A rediscovered attention to the outside environment leads to thinking of the landscape.

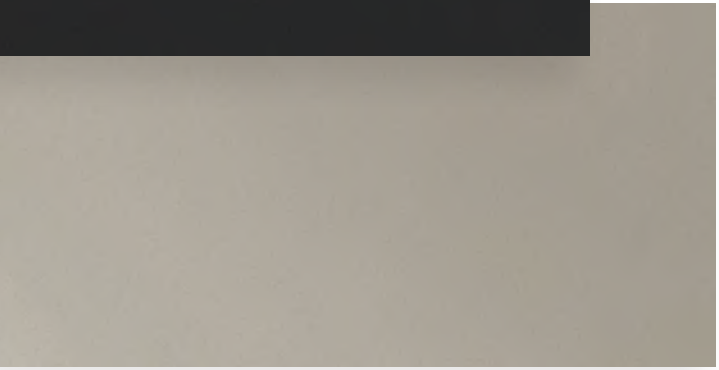

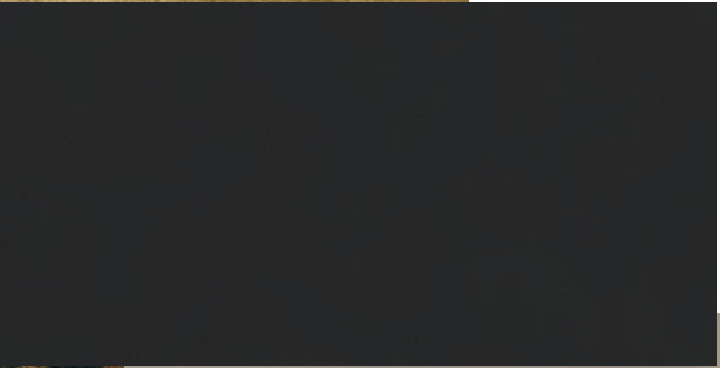

Nova becomes the conjunction point, almost invisible, between two worlds that do not exclude each other any longer, but coexist. Bringing the landscape inside, to us.

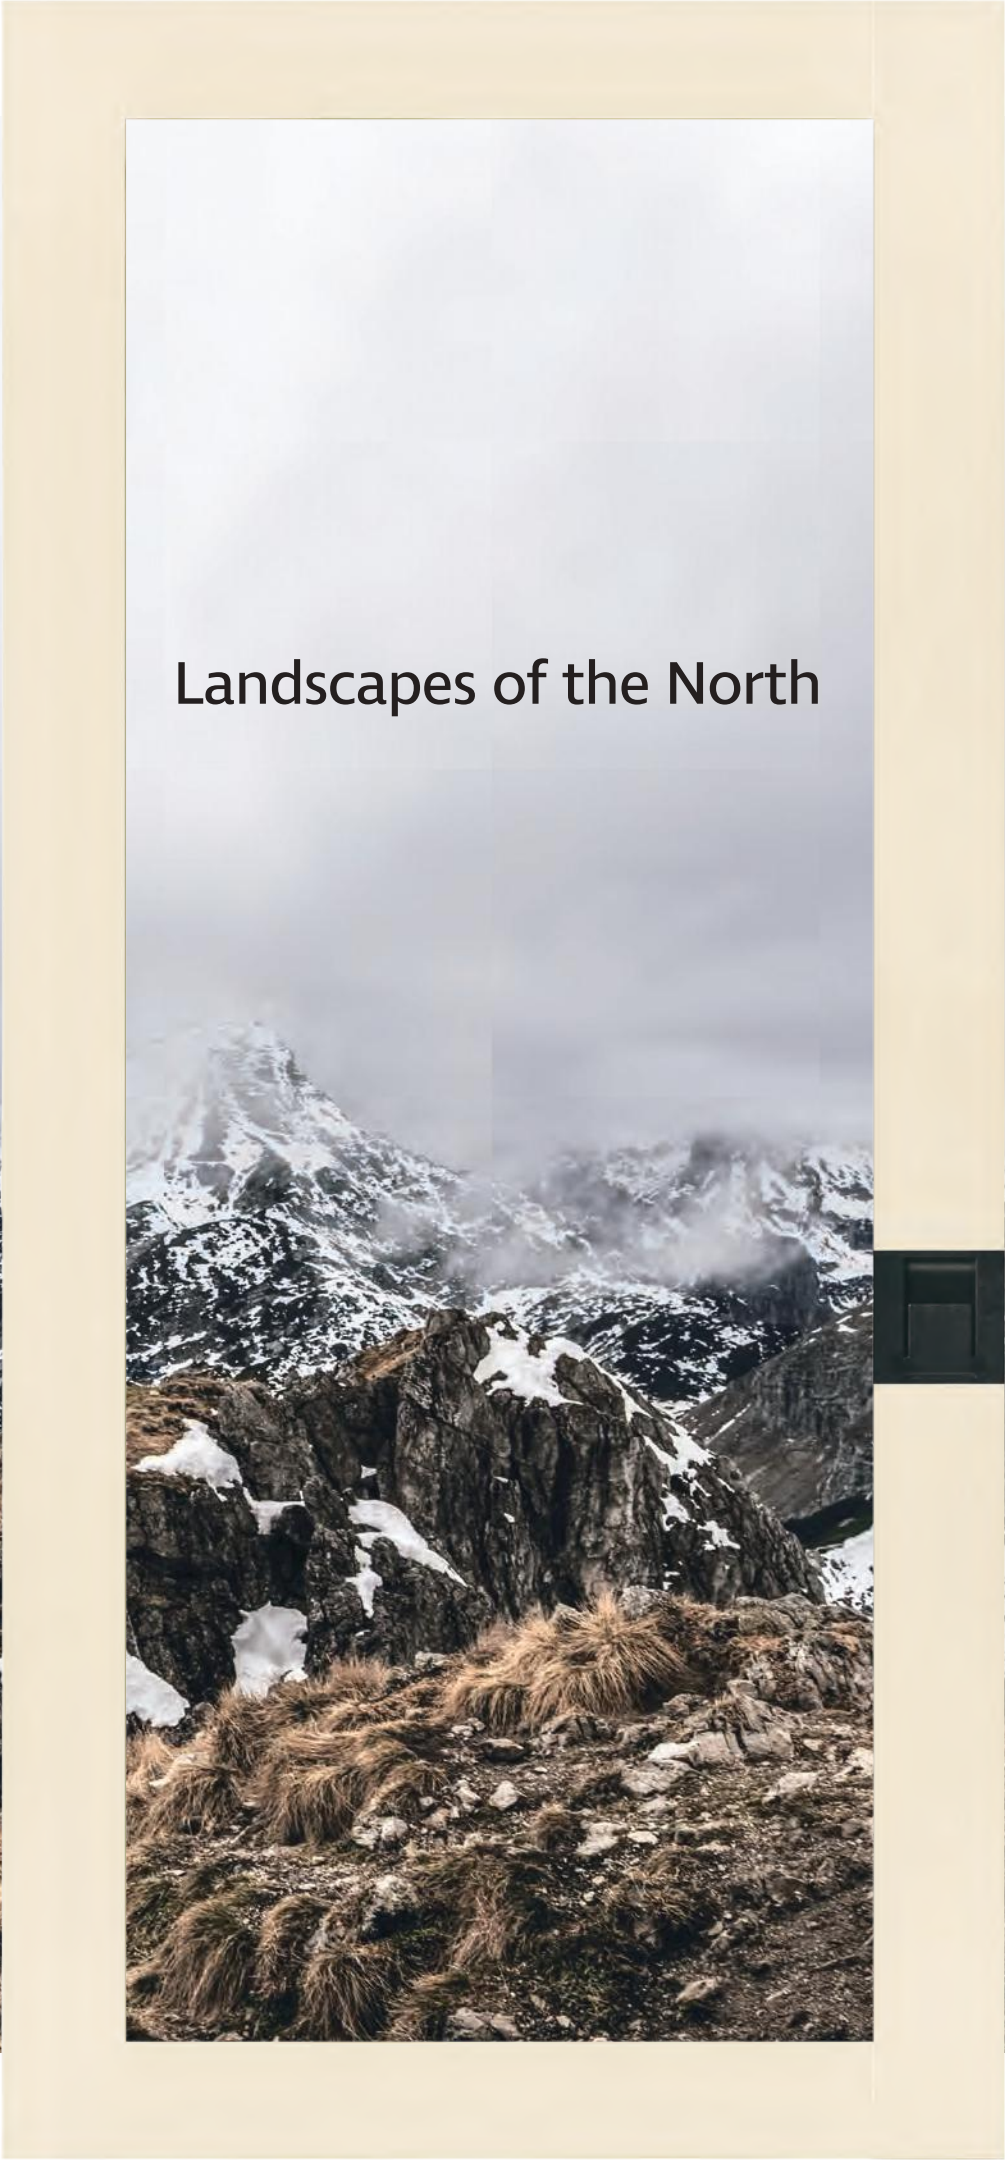

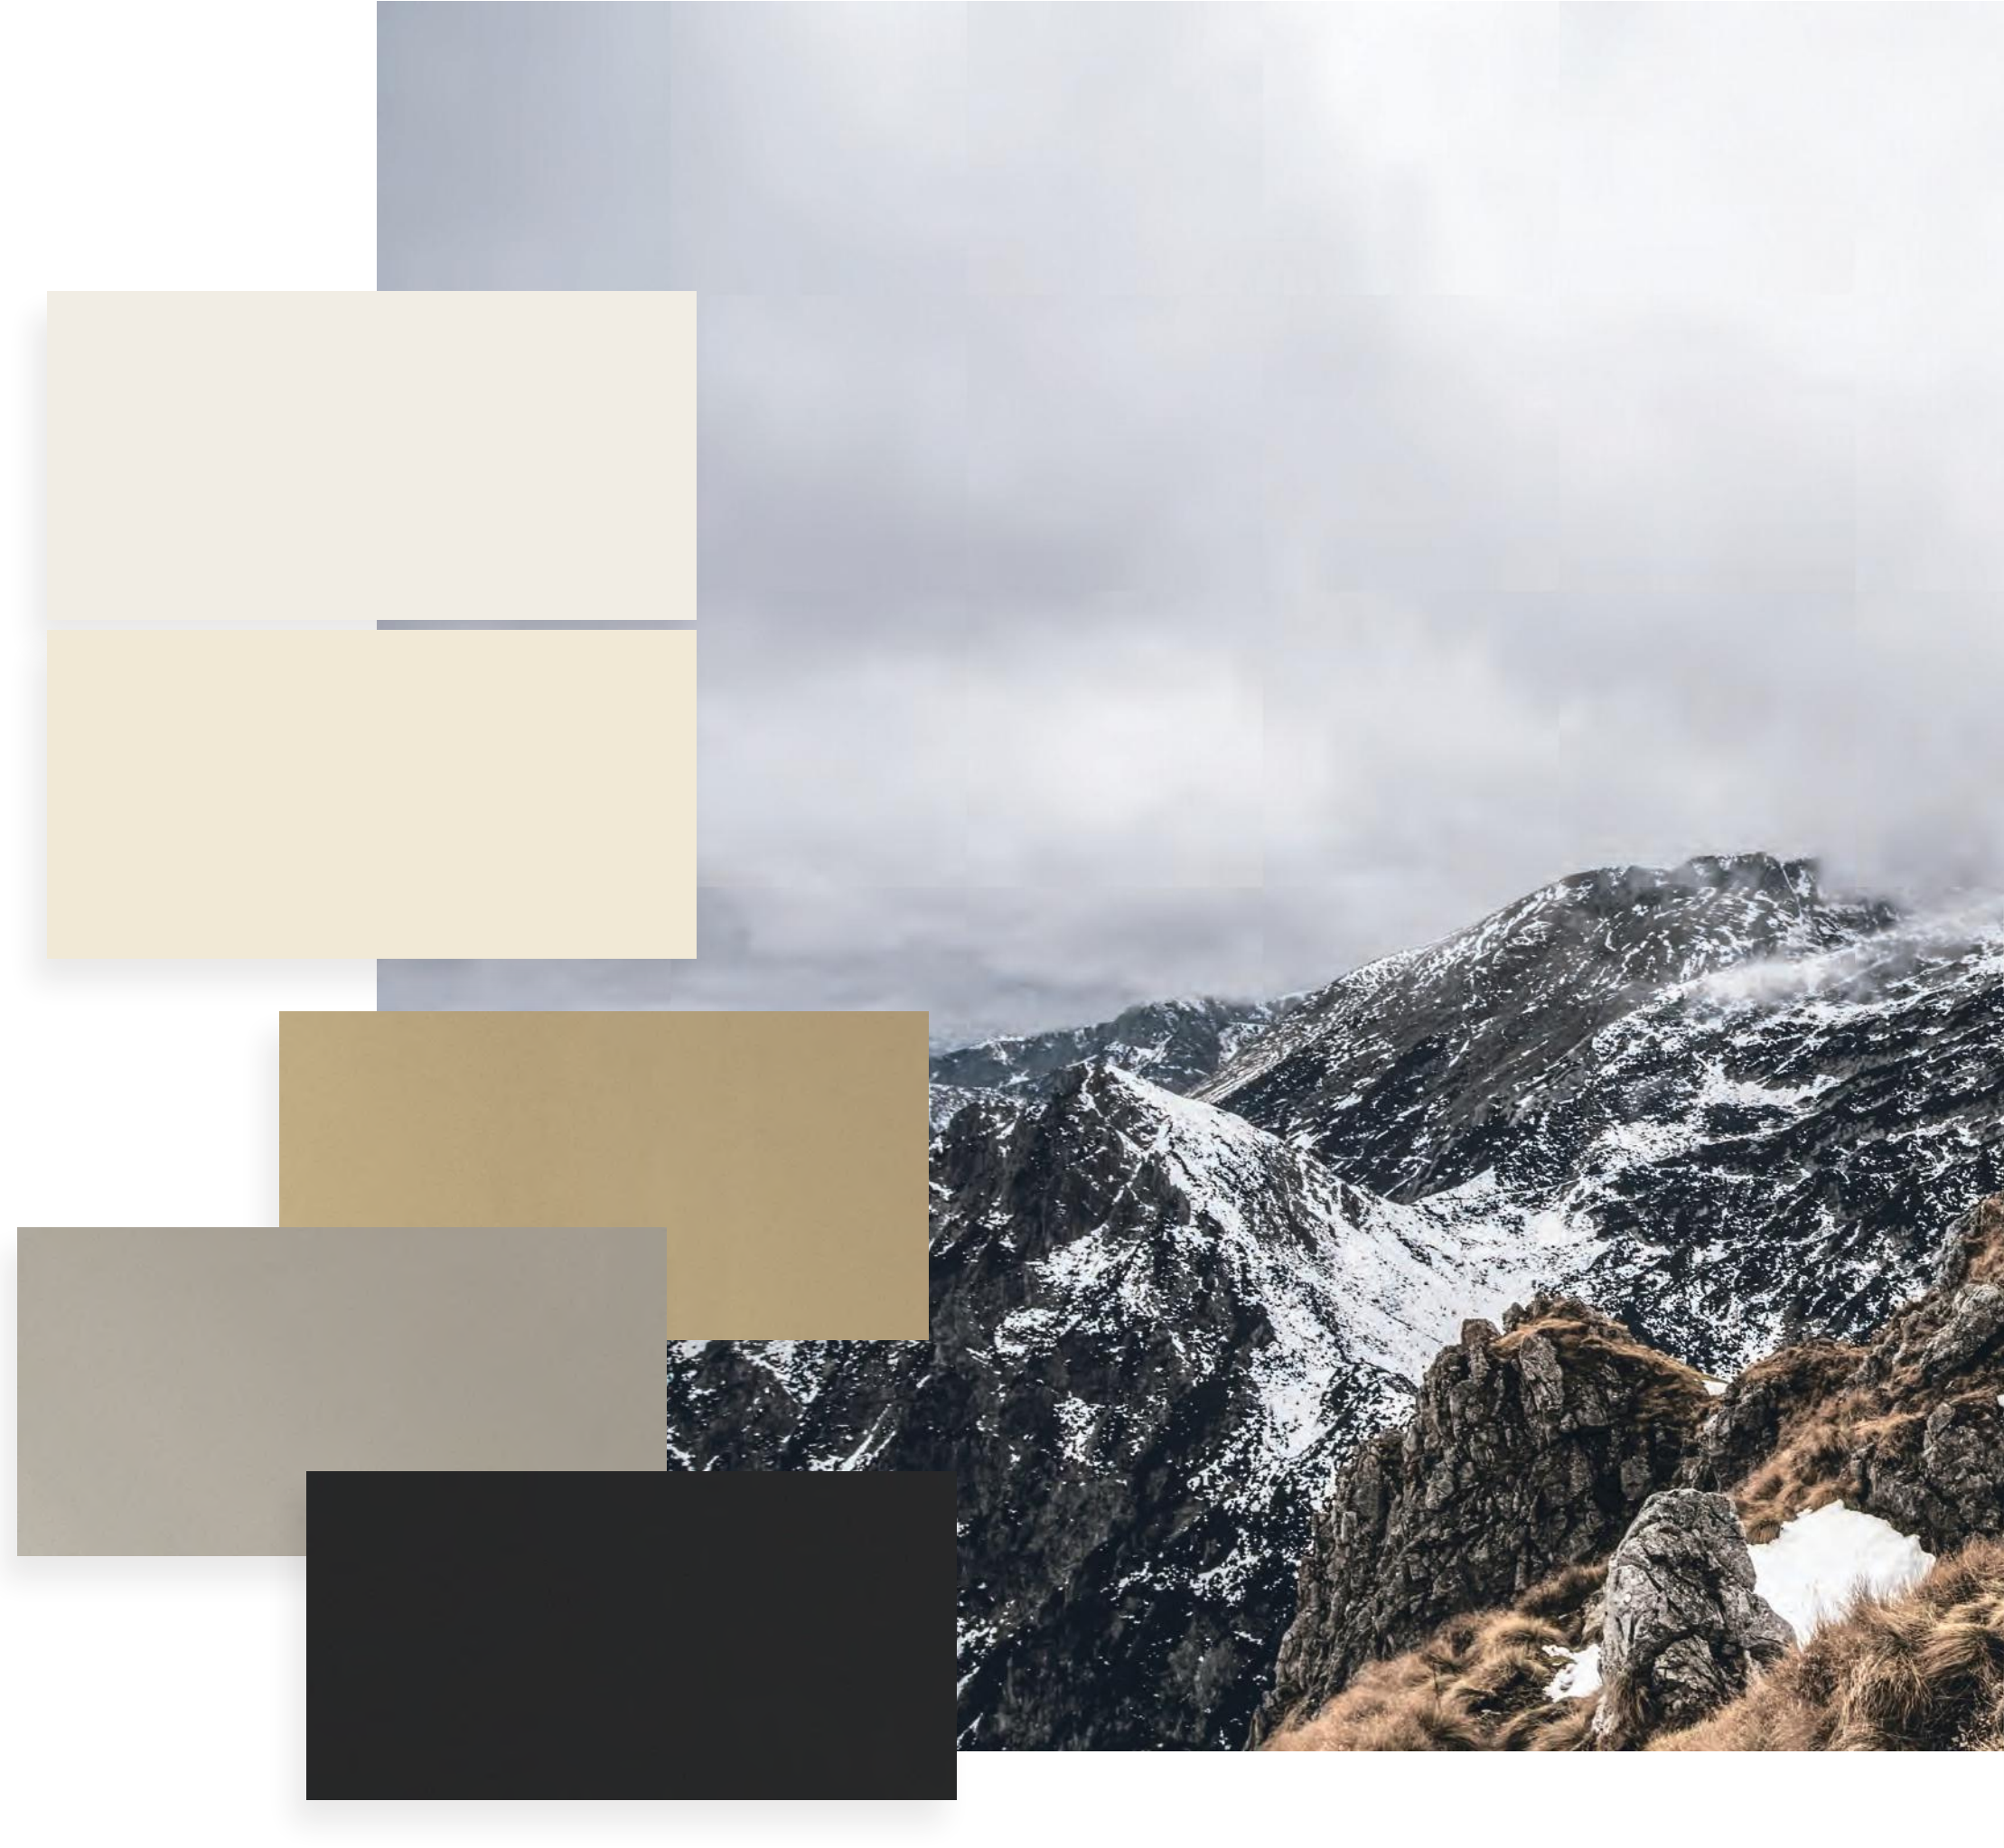

Landscapes of the sea

Landscapes of the city

# A specific color for each landscape

Nova visually opens the space to the outside world through colors, materials and finishes that are chosen to ensure a complete integration of the entrance solution with the surrounding landscape.

## Dark colors

Metropolitan

Smoke

Cosmos

## Warm colors

Platinum

Gold

Copper

The collection features 12 finishes carefully selected to match the dominant chromatic and material features of the different contexts.

## Cold colors

Deep Blue

Lagoon Green

Sea Silver

## Light colors

Ice

Sand

Pearl

## Door on glass façade

## Door with minimal-frame side panels

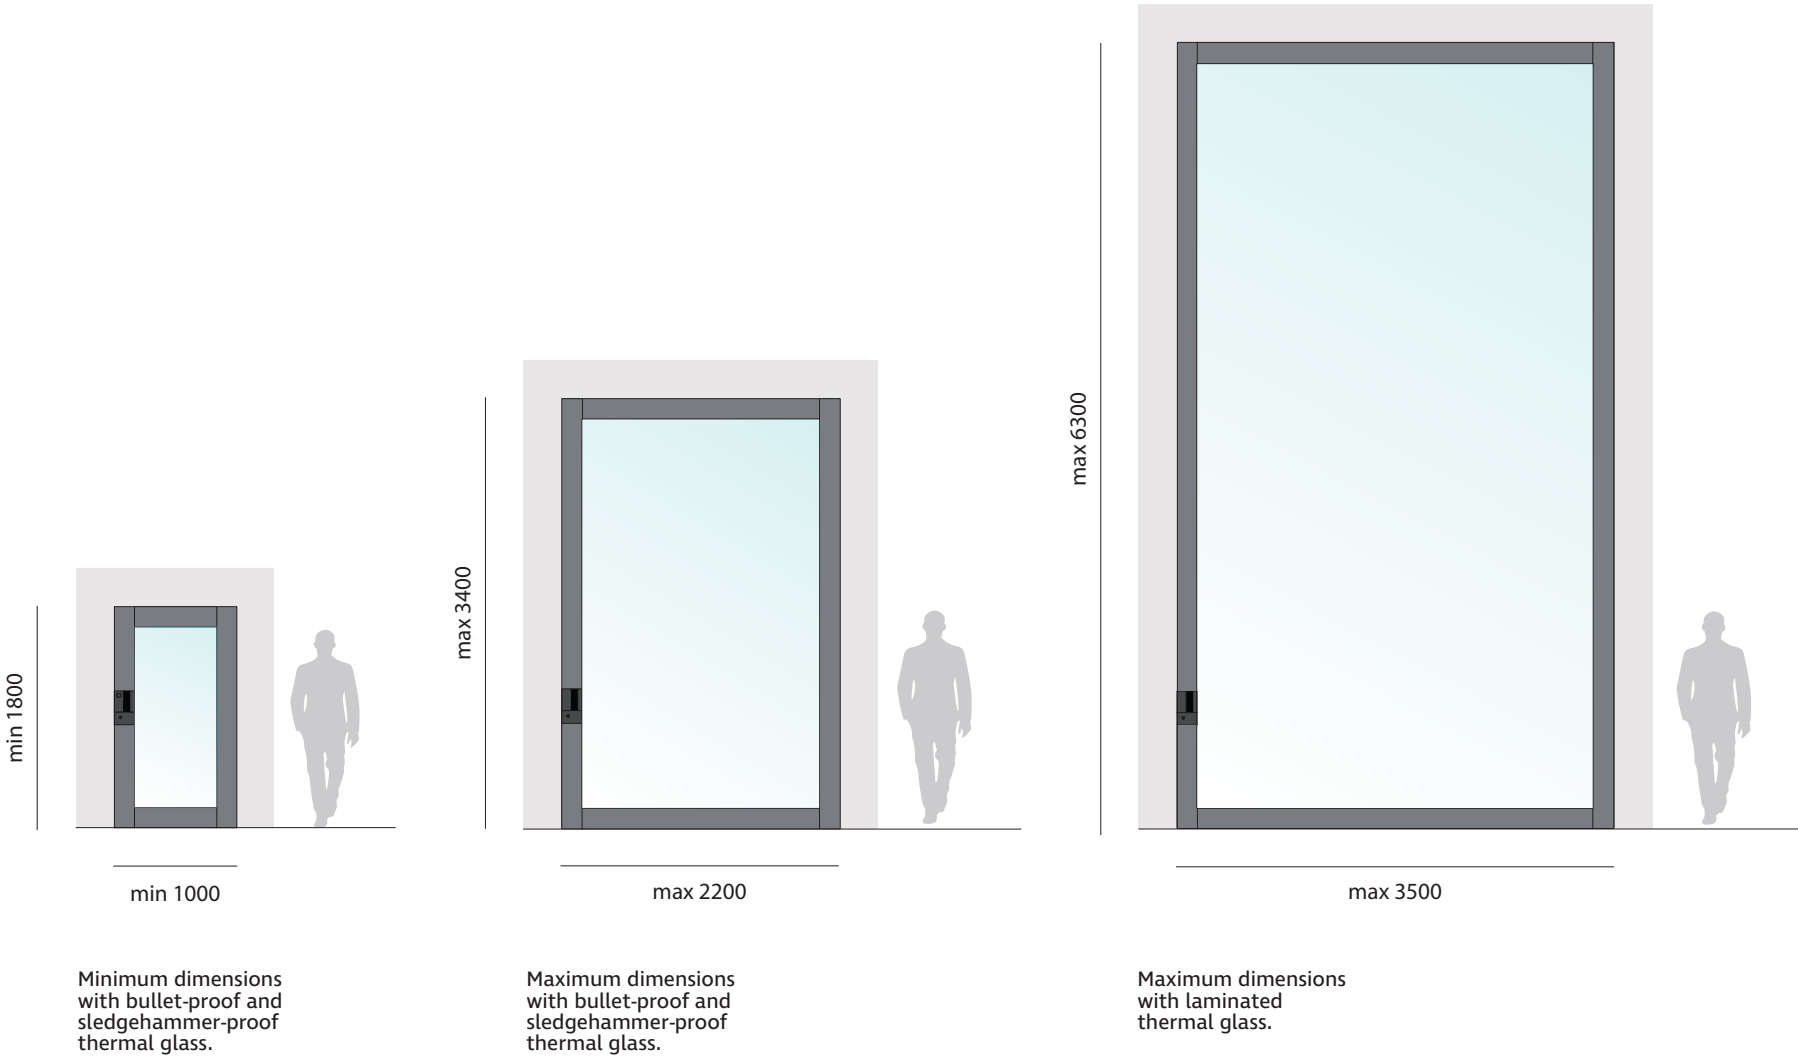

Door on glass façade

# Freedom in terms of size

Nova allows creating fully glazed out-of-size entrance solutions thanks to the nature of its features: the renewed pivoting opening mechanism and the steel support structure.

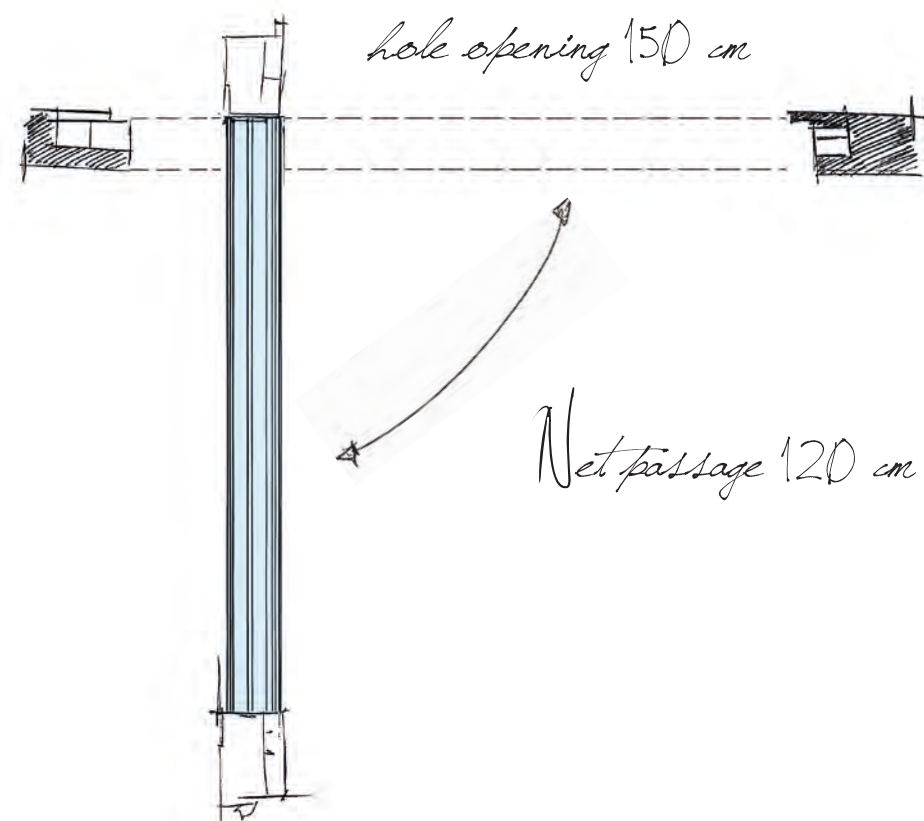

## Total coplanarity

Door, glass and handle become a single element, making the door homogeneous and free from any grooves or protrusions.

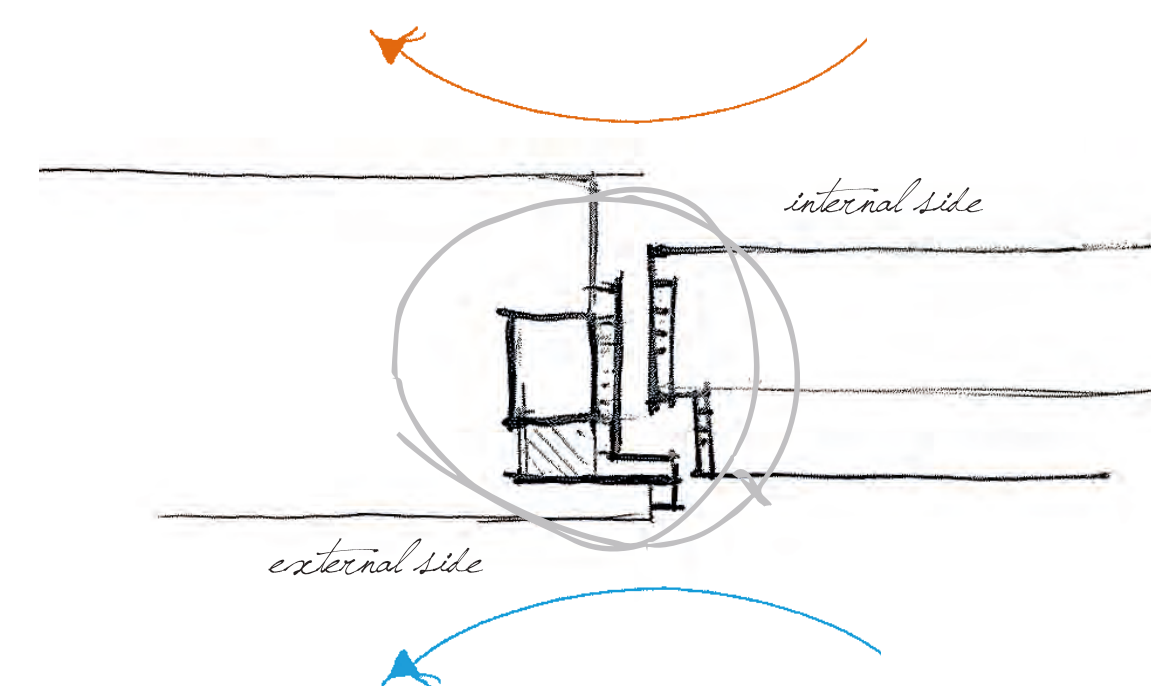

## Opening mechanism range

Thanks to its new pivoting opening mechanism, Nova allows for a greater net passage, which results in a wider useful space for the threshold crossing.

## Thermal-break frame

It increases exponentially the thermal insulation performance of the door while keeping the safety features and break-in performance values unchanged.

## A game of elements

A frame on the landscape is the expression of what it encloses. This means that each of its elements is the result of free combinations. A modular and customizable game.

## The Nova handle

Internal

External

It is possible to diversify the color and finishes of the inner and outer frames in order to create new harmonies between the spaces. The handles are available in matching or contrasting color to the frame one. The choice also depends on the type of public or private environment in which the solution is used.
